

MAKE A PAPER BOAT OUT OF A SHEET OF A4 PAPER

(it helps if you make this on a flat surface)

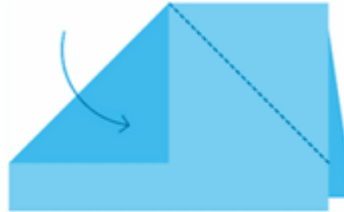

1

Fold A4 paper in half lengthways & make a crease along the centre. Then open out again.

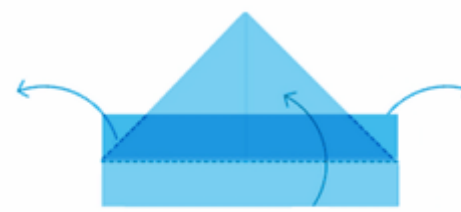

2

Fold in half again (but this time along the width).

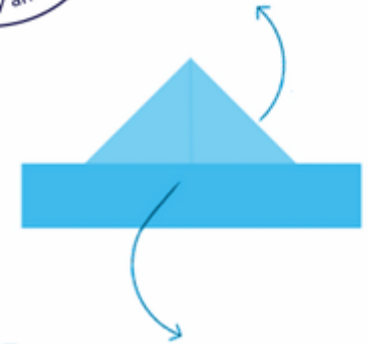

3

With the fold at the top, turn down the corners to meet the creased line.

4

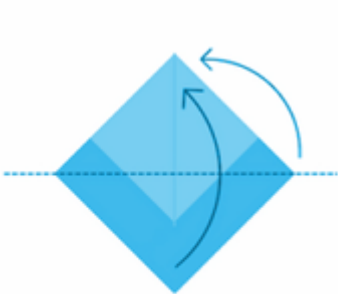

Fold the bottom flap up on one side – then turn over and turn down the small corners, before turning up the front flap.

5

Tricky bit!

Pull out the centres (where the arrows are shown), twist & flatten.

6

Fold front lower half up at the centre, turn over and repeat on the other side.

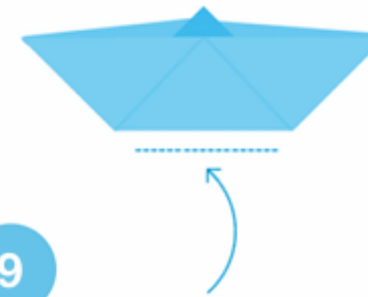

7

Another tricky bit! Pull out the sides (where the arrows in this picture are shown), twist & flatten.

8

From the tip, gently pull the two sides apart to reveal the boat shape.

9

Flatten out the boat, making sure to crease the two sides of the base to make a sturdy hull.

10

Flatten out the sail & see if your boat floats!
